* Michele DeStefano is a Professor of Law and the Larry Hoffman Greenberg Traurig Business of Law Chair at the University of Miami School of Law, a Program Chair and an Affiliated Faculty member at the Harvard Law School Executive Education Program, and an Affiliated Faculty member at IE Law School. She is also the Founder of LawWithoutWalls, Founder and Content Curator of the *Compliance Elliance Journal*, and a Cocreator and Chief Faculty Advisor of the Digital Legal Exchange. I'd like to thank Swethaa S. Ballakrishnen, Benjamin H. Barton, Paola Cecchi-Dimeglio, Tiffany Perez, and Don Swanson for their helpful comments and suggestions on earlier drafts. All errors are, of course, my own. This Essay was prepared for the Colloquium entitled *In Memory of Deborah Rhode*, hosted by the *Fordham Law Review* and co-organized by the Stein Center for Law and Ethics on October 21, 2022, at Fordham University School of Law.

3. Potential Objections and Responses	1245
CONCLUSION	1247

INTRODUCTION

Although their bank accounts might suggest otherwise,¹ these are not the best of times for lawyers who work in the corporate legal marketplace. And this is not because of the predicted upcoming recession.² Instead, the trouble with lawyers in the corporate legal marketplace is that they are failing to answer two calls to action made by corporate clients, both of which are of great magnitude and importance for the future of the profession.

The first call to action is one that Professor Deborah L. Rhode focused a lot of her scholarship on: the call to enhance diversity, equity, and inclusion (DE&I) in the profession.³ The second call to action is one I have focused a lot of my scholarship on: the call by corporate clients for lawyers to collaborate and innovate. Over the past five years, I have interviewed over 175 general counsels (GC), law firm partners, heads of innovation at law firms, and other corporate clients of lawyers.⁴ Also, I have led over 235 multidisciplinary teams that included lawyers on a four-month innovation journey.⁵ My research, along with others' research, demonstrates that corporate clients need lawyers who can proactively collaborate on multidisciplinary teams to tackle problems that are increasingly volatile, uncertain, complex, ambiguous, rapid, and high stakes.⁶

Although we have learned much more in the last decade about the nature of both calls to action and have made some strides, unfortunately, we still seem to be miles from adequately addressing them. In *principle*, lawyers in the corporate legal marketplace are deeply committed to enhancing DE&I and collaborating and innovating. But in *practice*, the legal field lags behind other professions.⁷ This is true despite the considerable research that supports the business case for both. Initiatives that enhance DE&I and those that spur collaboration and innovation lead to better, more creative solutions that meet broader organizational interests and increased revenue in the corporate legal marketplace.⁸ Putting aside the positives that can accrue if both calls are answered, the question is: what happens if they are not?

Of course, the magnitude of the risk if lawyers do not answer the call for enhanced DE&I is profound and has been written about extensively with much urgency.⁹ At stake is the perceived legitimacy of the legal system at large.¹⁰ However, when it comes to the call to collaborate and innovate, the question is: are the stakes that high, i.e., does it *really* matter if lawyers in the corporate legal marketplace fail to collaborate and innovate?

It is this question that this Essay urges should be taken seriously.¹¹ Admittedly, the risks of lost business and of what Professor Clayton M. Christensen defined as “disruptive innovation”¹² in the legal marketplace—while they may have scary consequences for lawyers—do not compare to

8. See *infra* Part II.

9. See *supra* note 3.

10. See *infra* notes 140–42 and accompanying text.

11. This Essay’s focus is limited in nature. Its purpose is not to provide a general discourse on the status of DE&I or of collaboration and innovation in the corporate legal marketplace. Its purpose is also not to theorize on how innovation or enhanced DE&I might disrupt the work of lawyers or other professional service providers. Additionally, although I touch on them peripherally, I do not address in depth the *other* reasons for which DE&I efforts have failed in the legal marketplace, e.g., whiplash, cognitive bias, pipeline issues, etc. All of those topics are left to other experts and scholars who have researched and written extensively on the subjects. The purpose of this Essay is to (1) highlight two calls by corporate clients that lawyers are failing to adequately answer and attempt to explain why they have not been answered, despite the business case for doing so; (2) identify the risks involved in failing to answer both calls; and (3) attempt to demonstrate that the two calls are interlocked in a way that hasn’t been stressed enough before. Yes, other scholars have noted the connection between innovation and DE&I, but to date, no one has argued as this Essay does—that we may never be able to solve the DE&I issue in the corporate legal marketplace if we don’t first solve the lack of collaboration and innovation skills and mindsets among lawyers.

12. Clayton M. Christensen, Michael E. Raynor & Rory McDonald, *What Is Disruptive Innovation?: Twenty Years After the Introduction of the Theory*, HARV. BUS. REV., Dec. 2015, at 44.

putting “the legitimacy of our justice system” at stake. Even the risk that lawyers will unintentionally contribute to their clients’ crises or otherwise create serious negative externalities is not of the same magnitude.¹³ However, the risk that this Essay is most concerned about stems from the possibility that the two calls to action are tethered in a negatively consequential way.¹⁴

That is, lawyers’ failure to learn how to collaborate and innovate with other professionals may *impede* the ability to make progress on enhancing DE&I in the corporate legal marketplace. Specifically, this Essay posits that if lawyers do not learn how to collaborate and innovate, they may help perpetuate the lack of DE&I in the corporate legal marketplace and be unable to contribute to developing innovative, viable solutions for improving DE&I.

Consider the following two anecdotes:

Anecdote #1. A firm identified that a root cause of DE&I initiatives failing to make a difference was the way in which work was allocated by partners. The firm discovered a new work-allocation tool designed to ensure that work was allocated to associates in a blind, nonbiased way that accounted for areas of interest, expertise, substantive benchmarks, and current workloads. However, partners refused to approve investment in the tech. They also refused a more rudimentary solution for adopting new procedures that would track work assignments against benchmarks to suggest alternate work-allocation options. When asked whether partners believed that each partner should be allowed to cherry-pick the associates they like for their work, without regard to equitable distribution, a common response was often something like: “I choose the associate! That’s the way I do it and that’s the way it’s always been done!”

Anecdote #2. A couple of years ago, a multidisciplinary team participating in LawWithoutWalls (LWOW)¹⁵ discovered that a consumer-lending tool at a large commercial bank had been developed using artificial intelligence (AI) that discriminated against single and nonwhite women. The team identified that the root cause was that attorneys were not brought into the product development process for two reasons: First, they weren’t viewed by colleagues as collaborative or innovative or helpful during the ideation stage. Second, the lawyers themselves weren’t proactive in attempting to collaborate with the business. As such, they were not part of the

13. See *infra* notes 147–72 and accompanying text.

14. Of course, a positive consequential relationship likely also exists. For example, studies show that as inclusion in a diverse workplace increases, so does the potential for collaboration. See, e.g., Sue Duris, *What Diversity and Inclusion Mean for Employee Engagement*, ICMI (Oct. 1 2018), <https://www.icmi.com/resources/2018/what-diversity-and-inclusion-mean-for-employee-engagement> [https://perma.cc/6VVV-JCRQ]; Carrie Ramsay, *Powered by Diversity and Inclusion: How Collaboration Makes Businesses Better*, 3M CAN. (Nov. 6, 2019), <https://sciencecentre.3mcanada.ca/articles/powered-by-diversity-and-inclusion-how-collaboration-makes-businesses-better> [https://perma.cc/K6AN-5GM3]; Marissa Abramson, *Diversity + Inclusion and Its Importance to a Company’s Collaboration Culture*, NEXTPLANE (Apr. 29, 2020), <https://nextplane.net/blog/diversity-inclusion-and-its-importance-to-a-companys-collaboration-culture/> [https://perma.cc/BJ5E-W8Q5].

15. See description *infra* notes 195–210 and accompanying text.

multidisciplinary development team and, therefore, could not add any value during product development, let alone ensure the ethical use of AI. Instead, they were the last stop for approval, which was too late and, as discussed in more depth later, being too late can have dire consequences.¹⁶

In both situations, in failing to be collaborative and innovative, the lawyers helped perpetuate (or failed to prevent) the lack of DE&I in the corporate legal marketplace. In the first scenario, the attorneys refused to adopt a system of work allocation that decreased implicit and institutional bias. Instead, they held on to a process that relies on difference blindness standards that normalize the dominance of white men and disproportionately disadvantage diverse populations in law firms.¹⁷ In the second scenario, the lawyers' abstinence from collaboration and innovation resulted in the creation of a tool that systematically discriminated against diverse populations. This Essay, therefore, argues that to enhance DE&I, in-house and firm lawyers alike need to be capable and willing to collaborate and innovate in two ways.

First, lawyers need to be able and willing—as individuals—to innovate and adapt the way in which they practice and work with others. This includes adopting new processes and systems that enhance DE&I. If lawyers don't collaborate and innovate in these areas, they may derail efforts that *could* move the needle. In fact, that's been proven the case in many initiatives, including those driven by clients¹⁸ and the recent Mansfield Rule¹⁹ (which mandated that 30 percent of candidate applicant pools consist of women, minorities, LGBTQ+ individuals, and individuals with disabilities).²⁰

Second, lawyers need to be able and willing to meaningfully collaborate in multidisciplinary innovation efforts to create novel solutions that truly begin to fill the DE&I gap. Some of the reasons why certain DE&I initiatives have failed (e.g., due to a supply issue)²¹ suggest that we likely need altogether different *innovative* solutions—because “systems reinforce and

21. See Paola Cecchi-Dimeglio, *Why the 30 Percent Mansfield Rule Can't Work: A Supply-Demand Empirical Analysis of Leadership in the Legal Profession*, 91 FORDHAM L. REV. 1161, 1188 (2023) (demonstrating that the Mansfield Rule fails because there is insufficiency of supply and recommending the creation of innovative “alternative” solutions).

reproduce themselves,”²² culture is extremely hard to change, and innovative cultures are extremely hard to create.²³ This means that we need lawyers with innovative mindsets and skill sets that can move beyond fixing what is broken to spanning the horizon by asking: How might we develop new corporate lending tools that do not discriminate against diverse candidates? How might we allocate work in a way that does not discriminate against diverse candidates? Or how might we develop a brand-new pipeline to legal education (and therefore also to law firm hiring) that completely changes the DE&I landscape?

The discussion that follows offers a snapshot of the two calls to action by corporate clients and lawyers’ failure to answer. After exploring the business case for answering both calls, this Essay attempts to demonstrate that the calls are tethered: progress on DE&I in the corporate legal marketplace may be impeded if lawyers do not start answering the call to collaborate and innovate. Therefore, we have a classic “chicken or egg” problem, and the importance of answering the second call rises. This Essay then seeks to identify the root cause of the problem. It submits that—whether due to temperament or training—the trouble with lawyers in the corporate marketplace is that many of them are not equipped to answer the calls. Research demonstrates that lawyers do not know how to collaborate or innovate, nor do they have the mindsets and skill sets of innovators. Plus, the departments and firms in which they work do not promote a culture of inclusion, collaboration, or innovation. Therefore, this Essay’s recommendation is to start at the root: help lawyers hone the mindsets and skill sets of innovators so that they have growth mindsets instead of fixed mindsets, so that they empathize with a wide range of stakeholders, so that they are inclusive and understand the importance of focusing on *how* they practice, and, importantly, so that they can collaborate with diverse professionals as part of the solution to our DE&I crisis instead of being part of the problem. To do that, this Essay recommends training aspiring and practicing lawyers in “design thinking”—a human-centered methodology for learning how to collaborate and innovate and that has the benefit of developing the skill sets and mindsets of adaptive, inclusive innovators. By collaborating with people from diverse backgrounds with design thinking techniques, lawyers can begin to answer both calls to action. It also recommends change management and adaptive leadership training for in-house lawyer leaders and firm partners who must lead a new culture and new breed of lawyers because that is a transformation of the most difficult kind.

22. Cecchi-Dimeglio, *supra* note 19, at 268–69 (“Networking, training, mentoring, and other common diversity interventions have been criticized for their failure to transform organizational cultures and structures . . . [T]hey do not focus on transforming the system or influencing the dominant group members . . .”).

23. See Gary P. Pisano, *The Hard Truth About Innovative Cultures*, HARV. BUS. REV., Jan.–Feb. 2019, at 62; see also MICHELE DE STEFANO, LEADER UPHEAVAL: A GUIDE TO CLIENT-CENTRICITY, CULTURE-CREATION, AND COLLABORATION (forthcoming 2023).

The Essay proceeds as follows: Part I summarizes corporate clients' two calls to action and lawyers' failure to adequately answer them. Part II outlines the business case for answering both and attempts to demonstrate what's at stake if lawyers do not. Part III posits that the possible root cause of the failure to answer both calls is that many lawyers do not have the mindsets and skill sets to collaborate and innovate. Simply calling out for lawyers to collaborate and innovate isn't going to work. Therefore, Part III recommends that aspiring and practicing lawyers train in innovation so that they hone the mindsets and skill sets of innovators.

This Essay concludes with a call to action of its own: lawyers in the corporate legal marketplace should be *voluntarily* lining up for the kind of training recommended herein because the two calls to action are mutually reinforcing and can interlock, either to keep lawyers stuck on both fronts or to move forward on both fronts. And there is icing on this cake: in addition to empowering lawyers to answer both calls to action, having the mindsets and skill sets of innovators enables lawyers to provide the type of client-centric experience that *delights* clients and gives lawyers in the corporate marketplace a competitive edge.

I. TWO CALLS FOR ACTION BY CORPORATE CLIENTS: DIVERSITY, EQUITY & INCLUSION AND COLLABORATION & INNOVATION

Currently, corporate clients are making two persistent calls for in-house counsel and outside lawyers. The first is a call to enhance DE&I in the corporate law marketplace. The second is a call for lawyers to collaborate and innovate. Although some progress toward answering these calls has been made, the trouble with lawyers serving corporate clients is that they are failing to answer both, and clients (and society) remain unsatisfied. The irony is that the business case for answering these calls is undeniable.²⁴ Lawyers who do so will reap many benefits, yet the calls are nevertheless left inadequately answered.

A. *The Call for Diversity, Equity & Inclusion*

The first call for lawyers in the corporate legal marketplace is one that has been made for decades. This is a call for enhanced DE&I. We have seen this call grow from the vague to the definite. It started back in 1999 when the former BellSouth GC convinced 500 GCs of major corporations to commit to promoting diversity in the legal profession and pressure their law firms to embrace diversity.²⁵ That original call was vague. It didn't specify exactly what was meant by diversity or exactly how diversity initiatives would work. In 2004, the call for diversity went further when the GC of Sara

24. See *infra* Part II.

25. See *Diversity In the Workplace: A Statement of Principle*, BUS. L. TODAY, July/Aug. 2000, at 41.

Lee attempted to translate the original call into a real plan²⁶ by asking GCs to request diversity statistics and make hiring decisions based, in part, on those statistics.²⁷ This led to GCs setting diversity benchmarks for law firms. For example, they asked that a certain percentage of all law firm partners to be female. Over time, the call for diversity matured. GCs set diversity benchmarks not only for their law firms in general, but also for the smaller teams that worked on their businesses. Today, the requisite proof of a commitment to diversity isn't only in the concrete numbers or the faces around the table. Forward-thinking clients, who have a range of efficiency paradigms and who care about diverse teams for all the benefits they exude, look for proof that their law firms provide meaningful opportunities for the development and promotion of diverse lawyers, and they are looking at multiple indicators. For example, some look at a law firm's flextime policies as a proxy for a firm's commitment to diversity.²⁸ Now, twenty years later, some clients, like HP,²⁹ Microsoft,³⁰ Novartis,³¹ and Shell³² reward or punish law firms based on their diversity efforts or lack thereof,³³ and they are using

new tools to allow their departments to drive the agenda. They are also joining forces. For example, DuPont, General Mills, Verizon, and Wal-Mart collaborated to create a Minority Lawyer Inclusion Incentive Program.³⁴ Corporate legal departments are also collaborating with law firms to enhance DE&I in recruiting and compensation,³⁵ such as by creating fellowship programs for students from diverse backgrounds.³⁶

However, even if some of this is working,³⁷ the trouble with lawyers in the corporate legal marketplace is that they aren't making big enough strides. Research makes it more than clear that we are not even close to where we need to be on the diversity front in the corporate legal arena.³⁸

Despite millions of dollars being spent on DE&I initiatives, the general picture is the same: law firms have made minimal progress in the last decade, and underrepresentation at law firms (especially in positions of power) persists. Although there has been increased representation of minority groups for associates, the same cannot be said for partners. White male attorneys disproportionately make up the leadership at firms³⁹ and represent 71 percent of the top 10 percent of highest compensated attorneys. However, white women represent 13 percent, and Black men and women represent less than 1 percent.⁴⁰ Moreover, there was a slight increase in the percentage of white partners, while the percentage of partners from racial and ethnic groups, women partners, and LGBTQ+ partners decreased within law firms.⁴¹ Unsurprisingly, attrition rates for white attorneys decreased, whereas attrition rates for all of the racial and ethnic groups increased.⁴² Additionally, the attrition rates among female attorneys was 5 percent higher (at 16 percent) than those among male attorneys (11 percent).⁴³ Moreover, attrition rates among white attorneys were almost half that among Black attorneys.⁴⁴ Attrition rates for associates of color were almost 10 percent

higher than the average rate of attrition and nearly doubled from 2020 to 2021.⁴⁵ The story isn't better for attorneys with disabilities, who are generally underrepresented at every level at law firms.⁴⁶ The executive director of the National Association for Law Placement summed it up aptly:

[I]t is equally clear that law firm leaders have failed to do the work necessary to break down the systemic barriers that prevent these individuals from joining them in the hallowed halls of partnership. . . . The data demonstrates that we are nowhere near achieving the progress one would expect from an industry that has been focused on the issue of diversity for over three decades.⁴⁷

Law firms are not alone in their failure as it relates to DE&I. Corporate legal departments might be ahead of firms in DE&I efforts,⁴⁸ but they are also struggling. In 2021, there was a sharp increase in women and minority GCs in the *Fortune* 1000.⁴⁹ However, women and minorities are still underrepresented at the GC level.⁵⁰ Moreover, any gains made for women-and-minority hiring at the GC level has not trickled down into the corporate legal department itself.⁵¹ Many have yet to implement their own diversity initiatives. Further, the initiatives focused on pushing DE&I in law firms lack granularity and impact.⁵² Research indicates that in-house lawyers are still giving less than 10 percent of their business to diverse outside counsel.⁵³ Further, although many corporate clients track law firm diversity efforts, they often do not review the data or discuss it with their firms.⁵⁴ Furthermore, a large portion of corporate clients do not even set diversity

goals to track against its collected data.⁵⁵ Even if they do, the negative consequences for firms failing to meet the goals are often minor, and the rewards for meeting the goals are often lacking.⁵⁶ Thus, although disappointing, it is perhaps unsurprising that a 2022 survey by Wolters Kluwer found that law firms ranked, in their list of top ten areas of importance, “a diverse and inclusive culture” as last.⁵⁷ In keeping with that, law firm culture is rated very low on inclusivity and creating a sense of belonging. As such, lawyers feel that they have to adapt to the culture that exists to succeed and that they cannot be themselves at work. Sadly, the factor that has the greatest impact on enhancing belonging for attorneys is whether leaders are perceived as making hiring and promotion decisions fairly and equally, and based on merit as opposed to personal networks. However, as brought to life with the first anecdote, law firms generally hire, allocate work, compensate, and promote in ways that lack organizational fairness, which perpetuates a noninclusive culture and impedes diversity efforts. Essentially, to advance in this system, the diverse candidates must behave (and maybe even think) like the people who are already there, which completely defeats the point of bringing in diverse candidates. And unfortunately, this cycle (and noninclusive culture) is transferred over to corporate legal departments because many in-house lawyers begin their careers working at law firms, and firms are where legal departments recruit talent.

Unfortunately, law trails behind other professions in DE&I.⁵⁸ Although exploring all the reasons for this is beyond the scope of this Essay, it is not because lawyers do not have good intentions. As other scholars have demonstrated, even with the best intentions, lawyers in the corporate marketplace fail to make progress because they have intrinsic biases for what makes good business and, importantly, law is tied in many ways to versions of itself that are not collaborative or innovative. This is the topic to which the next section turns.

B. *The Call to Collaborate and Innovate*

The second call by corporate clients that is often left unanswered is for lawyers to collaborate and innovate.⁵⁹ Like with DE&I, the calls have increased in specificity. The calls began with internal business clients asking

55. *See id.* at 15, 34 (reporting that 82.58 percent of in-house counsel do not set diversity goals for outside counsel).

56. *See id.* at 10, 15; *see also* RHODE, *supra* note 3, at 79–80 (“In my recent study of large firms, only one reported losing business over the issue and many were frustrated by clients who asked for detailed information on diversity and then failed to follow up or to reward firms that had performed well.”); *see also* Rhode & Ricca, *supra* note 3.

their legal departments to be more collaborative and innovative⁶⁰ (usually, in order to do more for less),⁶¹ which, of course, led to GCs asking their firms to do the same. However, over time, the call matured to also focus on behavior and ways of working. Internal business clients started asking their in-house lawyers to learn new skills and collaborate with the businesses on agile teams to solve problems, i.e., to innovate.⁶² In turn, in-house counsel began asking their firm lawyers to do the same. During the firm selection process, GCs request firms to demonstrate how they have innovated or collaborated and how they will do so in the future.⁶³ However, complicating the matter is that, even though clients are now asking for more *specific* information to demonstrate progress in this arena, the call for collaboration and innovation, unlike the call for diversity, has not yet moved as far along the trajectory from the vague to the very specific. Although this is likely to change,⁶⁴ until it does, it will be difficult for lawyers to answer the call or to measure success.

What is clear, however, is that the original call for collaboration⁶⁵ has grown into a call for more *proactive co*-collaboration and for innovation. Based on the 175 interviews I conducted with GCs, heads of innovation at law firms, and other corporate clients of lawyers, it appears that this is really a call for service transformation in disguise. It is a call for a new level and type of service that is client-centric, entails proactive co-collaboration on diverse teams, and requires the mindset and skill set of an innovator that mirror those of an inclusive⁶⁶ and adaptive leader.⁶⁷ To make clearer to

attorneys what clients are asking for when they ask for more collaboration and innovation, in 2016, I developed the Professional Skills Delta (the “Delta”).⁶⁸ See Figure 1 below.

Figure 1: Professional Skills Delta

Because I have written about the Delta extensively in other works,⁶⁹ I only provide a short overview here. The Delta is divided into three tiers. Of note is that substantive legal expertise is not even on the Delta—it is a given. Also of note is that as professionals move up the Delta, they move from an inward-focused “I’m the expert” attitude to that of an inclusive, adaptive, and client-centric professional who, like an innovator, seeks to provide delightful experiences that apply all three tiers of the Delta. This means keeping up with the trend in having a more business-oriented approach to providing legal services by providing project and budget management, estimates on returns on investment, and fast, proactive communication in easy-to-understand business language throughout the project (“tier one”). This also means proactively collaborating with others and approaching problem-solving with the mindset of an innovator who (1) understands the importance of problem-finding (and refining) and asking “why” vs. “what” questions, and (2) is growth-minded and empathetic, flexible, and audacious, while at the same time self-aware, curious, vulnerable, and trusting (“tier two”). And it also means doing all this not just to provide advice, save costs, or prevent risks, but to create new products and services and new revenue streams (“tier

three”).⁷⁰ This is especially true of legal departments in multinational companies (MNCs) for which joining the digital transformation has become an enterprise-wide imperative.⁷¹ Clients need in-house and firm lawyers that are proactive co-collaborators who find opportunities and help lead and manage teams to innovate and offer integrated solutions, in the way that the Big Four do in the legal marketplace today. For example, if in the future, a rental car company could make more money by selling the data it collects about its customers’ driving habits than it does from renting cars, it needs its lawyers to help it see that (*now*) and help it select and implement the right tech tools to collect the right data and create the data lakes with the right privacy permissions (*now*) so that, legally, they can be leveraged *later*.⁷² Therefore, the lawyer’s job is to collaborate with the other service providers (the data scientists, engineers, technologists, financial analysts, and compliance professionals) to help see the future and lead clients to it so that they can protect their clients’ future revenue. So, to truly answer the call to collaborate and innovate, lawyers need all the skills on the Delta.

With respect to in-house lawyers, they have made strides in honing the skills on the Delta and in answering the call for collaboration and innovation. This is made evident by research⁷³ and a wealth of literature demonstrating how in-house counsel is enhancing legal operations,⁷⁴ making strides in digital transformation,⁷⁵ and investing in new (and potentially disruptive) technologies.⁷⁶ A review of the winners of *The Financial Times*’s most

innovative in-house legal departments awards brings their advancements to life.⁷⁷ There are other examples of corporate counsel collaborating in different ways in various associations⁷⁸ within and with other disciplines.⁷⁹

Despite all this progress, and given that the justification for in-house legal departments' existence is at stake, research indicates that many in-house legal departments are still failing to meet expectations and demands when it comes to collaboration and innovation. Research points to “gaps in process management and underuse of technology.”⁸⁰ Also, in a 2020 Legal Operations Maturity Benchmarking Report by the Association of Corporate Counsel, two of the four lowest-ranked areas in terms of maturity were change and innovation management.⁸¹ Lastly, research indicates that GCs are aware of these gaps and recognize the need to be more collaborative and innovative and to invest more in bridging those gaps.⁸² Although corporate legal departments tend to score better on culture than firms do, many report a need to create a culture of collaboration.⁸³

The results for firms, unfortunately, aren't any better. Over the past decade, many large firms have made incremental improvements to their business models.⁸⁴ They have improved their internal systems to enhance their efficiency, use of technology, and processes.⁸⁵ Some have created captive subsidiaries⁸⁶ and are using data to enhance profitability.⁸⁷ Many have created new positions for “innovation counsel” or “chief innovation

officer.”⁸⁸ Some have created legal tech incubators.⁸⁹ Others have begun to change their compensation structures so that collaboration and innovation can count toward attorneys’ billable hours and progress to promotion.⁹⁰

However, law firms are still failing to meet the demands and needs of corporate clients when it comes to collaboration and innovation (i.e., providing a more client-centric, integrated approach to services) and to culture.⁹¹ Corporate clients continue to complain that firm lawyers are not collaborative and not innovative, i.e., that they have fixed mindsets,⁹² that they refuse to change, adopt new technologies,⁹³ and take risks,⁹⁴ that they jump to solutions that solve symptoms instead of root causes,⁹⁵ that they fail to listen and effectively communicate,⁹⁶ and that they leave opportunities on the table.⁹⁷ GCs are dismayed by firm culture and how disconnected lawyers are at firms. After a recent outside-counsel review process, one GC remarked, “we started playing a kind of Bingo for the number of firms that said they were ‘collaborative,’” because the irony was that “so many firms didn’t know why they were there and it didn’t seem like they had even met before, or studied our business, and it was really generic as if the firm didn’t

have any purpose or culture, let alone a collaborative one.”⁹⁸ This was a typical comment by GC interviewees, and it makes sense given that a key indicator of a collaborative culture is an organization’s progress on DE&I (which, as explained above, is limited at firms). Secondary research supports my interview research—the culture within firms is often anything but one of inclusion and collaboration and innovation, and instead is competitive with intense workloads.⁹⁹

Law firms are aware that they are falling short. In a 2020 survey conducted by Wolters Kluwer, approximately 70 percent of law firms reported that they were unprepared to keep pace with changes in the legal marketplace and to meet changing client expectations, and that the biggest barriers include the difficulty of change management and resistance to change by lawyers,¹⁰⁰ especially those who are in leadership roles.¹⁰¹ In keeping with that, studies show that although a great percentage of law firms have invested in innovation initiatives, a very low percentage adopt them.¹⁰² Worse, some research indicates that law firms’ efforts toward pleasing clients through innovation are *decreasing*.¹⁰³

Additionally, like with DE&I, although the call has been loud, and GCs have said that they will not be inclined to give firms business if they aren’t a collaborative and innovative partner,¹⁰⁴ it appears that GCs often don’t check to see whether firms’ claims during the selection process were accurate, nor do they push firms to live up to their promises.

II. WHY LAWYERS SHOULD ANSWER BOTH CALLS TO ACTION

Answering both the call for DE&I and the call for collaboration and innovation represents great potential upside for corporate legal departments, firms, and lawyers. The same is true for clients.

98. This quote was taken from an interview that my colleagues and I conducted with a general counsel of a *Fortune* 500 global pharmaceutical company in the context of a larger article on digital transformation in the corporate space. See DeStefano et al., *supra* note 61, at 230 n.150.

A. *The Business Case for DE&I, Collaboration, and Innovation*

The business case for DE&I is well researched and papered.¹⁰⁵ Studies show that companies that are more diverse are 25–36 percent more profitable.¹⁰⁶ Evidently, this is also true when the executive leadership is more diverse.¹⁰⁷ Studies show that companies in the top quartile in gender diversity outperform those in the bottom.¹⁰⁸ Additionally, the companies that were the most ethnically and culturally diverse outperformed those that were least diverse by 36 percent.¹⁰⁹ In keeping with that, companies that are leaders in their industry for DE&I perform better than the market average in decision-making because they are almost 30 percent better at spotting and reducing risks.¹¹⁰

DE&I may also help firms and legal departments recruit and retain diverse talent,¹¹¹ including millennials¹¹² and members of Gen Z¹¹³ (i.e., “digital

natives”¹¹⁴) because DE&I at the workplace is extremely important to both.¹¹⁵ Gen Z even wants their employers to mirror their diversity,¹¹⁶ which is a large task given that Gen Z is the most diverse generation of Americans yet.¹¹⁷ Also, studies show that when their companies embrace diversity, and their leaders lead with inclusion, millennials and members of Gen Z are more actively engaged at work, more productive,¹¹⁸ and less likely to be absent.¹¹⁹ And of course, the costs associated with turnover in the corporate legal marketplace are high. Replacing a firm associate is estimated to cost between \$200,000 to \$500,000.¹²⁰ In addition to retention, there are many benefits tied specifically to diversity in age and generation, such as increased engagement, productivity, and breadth of skills, as well as more mentorship opportunities. In sum, many studies demonstrate that enhanced diversity is linked to profitability and financial health.¹²¹

In keeping with the main argument of this Essay—that the call for innovation and collaboration is inextricably intertwined with the call for DE&I—research demonstrates that when diverse teams collaborate, they are more creative, better at problem-solving, and better at innovation. In fact, studies report that companies that outperform in DE&I have higher rates of innovation and almost 20 percent higher revenues as a result innovation.¹²² Although conflict can develop with diversity,¹²³ when managed appropriately,¹²⁴ diverse teams are more productive and provide a competitive advantage.¹²⁵ In fact, the opposite also holds true. Although homogeneous teams are better at being “homogeneous” than diverse teams, they do not perform better, even when they experience less conflict.¹²⁶ Further, diversity of all kinds—inherent and acquired,¹²⁷ and including age, religion, race, expertise, discipline, gender, value systems, and even ambition—has been proven to enhance teams’ success.¹²⁸ This is because diverse experiences change the nature of the process when multiple perspectives are heard and considered. This is called the Medici Effect: creativity and innovation abound when talented people from different fields

collaborate.¹²⁹ In keeping with that, research shows that teams are more innovative when their leader has some multidisciplinary expertise¹³⁰ because they are better at stimulating information-sharing across disciplines and at drawing attention to others' knowledge and varying approaches.¹³¹

Arguably, diverse collaboration toward innovation has the potential for even *more* benefits in legal departments and firms because of how little diversity exists in lawyers' training regimes and the licensing structure. Many of the professionals at firms and legal departments are lawyers. The benefits of hiring and retaining diverse talent, therefore, increase. Studies about the legal market support this—when more than one practice group at a law firm collaborate, revenue triples.¹³² And it goes on from there. Similarly, individual lawyers who collaborate more make more money for themselves and others.¹³³ My interview research and qualitative experience in leading 235 multidisciplinary teams on a four-month innovation journey support this data. When lawyers collaborate with their clients on an innovation initiative, the relationship gets stickier and yields additional business returns.¹³⁴ And there is other concrete data to prove that collaboration and innovation in the legal marketplace lead to financial rewards. Consider the amount of investment in legal tech and the estimated market cap for LegalZoom. Also, a 2022 Wolters Kluwer study identified an ongoing trend in which firms that are leaders in tech investment and adoption are more profitable.¹³⁵ The opposite is also true for those firms that are lagging.¹³⁶

In addition to making financial sense, answering the call to collaborate and innovate yields other benefits for firms and legal departments. Research shows that that in-house departments and firms that are technology leaders are more resilient, agile, and better performing.¹³⁷ Other added benefits include enhanced brand reputation and a competitive advantage, which serve as “techno capital.”¹³⁸ This has a broad impact on attracting clients, building relationships, and expanding business with current clients.

B. The Risks of Failing to Answer Both Calls to Action

Of course, if there is increased financial revenue for *answering* both calls, there is also a risk of decreased revenue downstream if these calls are *not answered*.¹³⁹ This section analyzes the risks at stake beyond financial ones.

The risk of failing to enhance DE&I is profound and has been written about extensively. No one needs convincing. Therefore, this section will be brief. At stake is the perceived legitimacy of the legal system at large. The lack of diversity in the corporate legal marketplace decreases the public's confidence in our legal system, which is already low.¹⁴⁰ And as the American Bar Association points out, "racial and ethnic diversity in the legal profession is necessary to demonstrate that our laws are being made and administered for the benefit of all persons."¹⁴¹ Further, the only way to ensure fair representation of citizens in our legal system is to ensure that it contains a diverse population of attorneys. Moreover, because the nation's leaders are typically also lawyers, Justice Sandra Day O'Connor reminds us that "[i]n order to cultivate a set of leaders with legitimacy," the "path to leadership" should "be visibly open to talented and qualified individuals of every race and ethnicity."¹⁴²

However, the risks related to not answering corporate clients' call for enhanced collaboration and innovation may not seem as concerning. If lawyers do not learn how to collaborate or innovate, they may disappoint their clients and, as a result, lose business, fail to see an opportunity to reduce costs, or fail to create revenue-generating ideas. They may even open the door to what Christensen defined as "disruptive innovation"¹⁴³ in the corporate legal marketplace, a real threat. Over the past century—and particularly in the last twenty to twenty-five years—there has been an upscaling of every sector of the labor market, and lawyers are not immune to these changes. Plus, legal profession functions have evolved significantly over the past twenty-five years. Indeed, it is because of these changes that clients' call for collaboration and innovation has continued to escalate. Lawyers and firms who fail to learn how to collaborate and innovate in an

142. *Id.*

143. See Christensen et al., *supra* note 12.

environment where the world continues to change risk irrelevance. Law is not an obvious problem for huge global corporations with broad operations, but it could be helpful in terms of strategy and approach. In failing to collaborate and innovate, lawyers are missing a chance to increase relevance at all levels. In addition to collaborating, lawyers need to prove that it's worth it to loop them in on more than just the obvious legal issues. As Rhode pointed out, the nature of the contemporary corporate legal landscape is increasing in "complexity, scale, pace, and diversity."¹⁴⁴ This means that decisions "play out on a wider stage," with less time for informed analysis and discussion.¹⁴⁵ Plus, regulations have become even more complicated, especially with the passing of the European Union's General Data Protection Regulation.¹⁴⁶

Therefore, the risks attached to lawyers failing to collaborate and innovate could have serious consequences. For example, in failing to collaborate, lawyers may contribute to their clients' failure to comply with the law and repeat past mistakes. The story of Enron and the question of "where were the lawyers?" is pertinent here.¹⁴⁷ Although some may claim that Enron happened because lawyers were *too* collaborative, arguably, had they been more empathetic with more stakeholders and more open-mindedly inquisitive like innovators are, they might have been more aware and had a more "contemporaneous appreciation" of the risks.

In addition to failing to reduce risk, lawyers may contribute to their clients' creations of externalities that have serious negative consequences.¹⁴⁸ Consider the anecdote from the introduction demonstrating the risks related to algorithmic bias baked into big data¹⁴⁹ and the machine-learning systems used by business professionals.¹⁵⁰ Having lawyers collaborate and innovate

Justice: Avoiding an Inequitable Two-Tiered System of Legal Services*, 24 YALE. J.L. & TECH. 150, 199–202 (2022) (exploring the harmful effects that can result from bias in AI-driven legal processes but

with the development teams in an agile way can help prevent groupthink and the creation of a product that will hurt diverse populations, thereby saving the company a lot of wasted money. That is, as long as lawyers approach multidisciplinary collaboration like innovators do.

Another risk is that lawyers may contribute to their clients' failures to ask the right questions and solve the right problems to avoid a calamity. Consider that General Motors (GM) knew for almost a decade that there was a problem with its cars' ignition switches—they had been designed with less torque than originally called for in the product specification¹⁵¹ and could easily be switched off by users.¹⁵² GM (with the help of its lawyers) convinced the regulators that the ignition switch issue was not a *real* safety problem because it only caused “a moving stall,”¹⁵³ i.e., the car could still be safely moved to the roadside.¹⁵⁴ However, during this same time, airbags were not deploying in the same cars, but because of the way that the ignition problem was defined, it was not connected to the airbag problem.¹⁵⁵ As Professor Robert Eli Rosen aptly pointed out, the GM team framed the ignition switch issue as one in which a driver can bump the key ring, resulting in engine-off coasting.¹⁵⁶ However, “[n]one realised (‘Inexplicably’)” that this was “also ‘electricity off coasting.’”¹⁵⁷ Thus, they didn't realize that when the ignition switch turned off, the “loss of motive power” caused a loss of electricity, which then caused the airbag to not deploy.¹⁵⁸ This is a classic example of failing to find and solve the right “problem,” i.e., solving the symptoms instead of the root cause. Importantly, and as noted in the second tier of the Delta, this is what innovators know *not* to do. The lawyers were blamed by regulators for “a sin of omission” in failing to detect the problem as quickly as they could have and not pushing hard enough.¹⁵⁹ However, the *real* sin of

contending that “[e]ffectively-calibrated AI, on the other hand, can actually help combat bias”). *But see* Frida Polli & Will Uppington, *Resetting the Conventional Wisdom: Using AI to Reduce Bias*, INFORMS (Aug. 24, 2022), <https://pubsonline.informs.org/doi/10.1287/LYTX.2022.05.02/full/> [<https://perma.cc/ENM2-J8GH>].

omission here was the lawyers' failure to proactively collaborate and innovate. As Rosen explained, the delayed recall was in part due to the fact that GM was "composed of silos,"¹⁶⁰ and "GM lawyers created a divide between themselves and engineering."¹⁶¹ The GM lawyers saw themselves as defense lawyers.¹⁶² They kept busy responding to products liability claims and determining what constituted a "safety defect."¹⁶³ They "raised every possible defense against liability," including blaming the drivers for knocking the ignition switches with their knees.¹⁶⁴ True, it could be that the lawyers didn't understand that turning off ignitions turned off other parts of the cars. But Rosen contended: "Part of the lawyers' task is to understand the problem. By seeing themselves as 'just law lawyers,' GM lawyers failed their company."¹⁶⁵ Perhaps if the GM lawyers had proactively collaborated (instead of working in silos) and viewed the accidents as problems requiring creative, innovative solutions—as opposed to just "cases to be defended"¹⁶⁶—they could have helped the company see the real problem and saved a lot of loss and lives.

Some might argue that it is not the lawyers' job, but corporate clients will argue the opposite. Because there are no solely legal problems, attorneys need to collaborate with corporate clients to solve problems with both a legal and business mindset. Perhaps failure could have been avoided (and lawyers could have fulfilled their duty of ethical safeguarding) if the lawyers had done so in the GM case. Unfortunately, if lawyers do not learn to do so in the future, safeguards that companies claim are in place will not prevent similar mistakes.

These examples demonstrate serious repercussions from lawyers' failure to collaborate and innovate in the corporate legal marketplace. Yet, the risk that this Essay is most concerned about stems from the possibility that the two calls to action are tethered in a negatively consequential way: lawyers' failure to learn how to collaborate and innovate may *impede (or make impossible)* their ability to enhance DE&I in the corporate legal marketplace.

First, if lawyers continue to work in silos, allocate work, promote, recruit, and compensate as they always have, DE&I initiatives in the corporate marketplace will have a hard time moving the needle. In fact, that's been proven with many initiatives including those driven by clients¹⁶⁷ and the recent Mansfield Rule.¹⁶⁸ Some of the reasons identified for this failure include lawyers' individual failures to change, to innovate how they work,

and to adopt new processes¹⁶⁹ like the work-allocation tool described in the introduction. Therefore, if lawyers aren't open to collaborating and innovating with diverse colleagues, they will derail efforts that *could* move the needle and, therefore, help perpetuate the lack of diversity in the corporate legal marketplace.

Second, some of the identified reasons that certain DE&I initiatives have failed—for example, due to a supply issue¹⁷⁰—suggest we likely need different *innovative* solutions that attack the DE&I problem. As other scholars have pointed out, there is no “quick fix.”¹⁷¹ Thus, if lawyers fail to meet corporate clients' call to collaborate and innovate within diverse teams, they will not be able to meaningfully contribute to finding innovative, *viable* solutions that create measurable, sustainable, and impactful improvements to DE&I. This suggests that we might be facing a “chicken or egg” problem that will only be overcome if we get to the root cause.

III. A POSSIBLE ROOT CAUSE AND A RECOMMENDED SOLUTION

If the business case is so great for answering clients' calls to action, and the stakes are so high for failing to do so, then why aren't lawyers collaborating, innovating, and embracing DE&I? Sure, many lawyers are resistant to change, and from a behavioral economics perspective, there's likely a benefit to remaining in the situation they are in because change creates a lot of loss, and loss aversion is usually high. Although all of this contributes to the problem, this part posits a different, possible root cause. After that, it provides a recommendation that hopefully can help put the chicken or egg question to rest.

A. A Possible Root Cause

Although lawyers excel at complex problem-solving and analytic and strategic thinking, they test low on innovator attributes, i.e., what some call interpersonal and soft skills, when compared to other professionals' empathy

169. See William D. Henderson, *Solving the Legal Profession's Diversity Problem*, NALP PD Q. 23, 23 (2016) (explaining it as a systems failure); *id.* at 24–33 (arguing that DE&I can be enhanced if law firms change current hiring, work allocation, training, feedback, coaching, and mentoring processes); Paola Cecchi-Dimeglio, *Designing Equality in the Legal Profession: A Nudging Approach*, 24 HARV. NEGOT. L. REV. 1 (2018) (arguing for the adoption of a “systems thinking” and “nudge approach” to redesign organizational procedures and systems that remove biases and foster a level playing field for men and women); Anusia Gillespie, *Q: How Does Innovation Intersect with Diversity, Equity, and Inclusion (DEI) Initiatives in Law?* (298), LEGAL EVOLUTION (May 4, 2022), <https://www.legalevolution.org/2022/05/q-how-does-innovation-intersect-with-diversity-equity-and-inclusion-dei-initiatives-in-law/> [https://perma.cc/8BS4-9PBT]; RHODE, *supra* note 3, at 60 (“Many of the obstacles to diversity and equity in legal practice are symptomatic of deeper structural problems.”); *id.* at 80 (“Better mentoring programs, more equitable compensation and work assignments, and greater accountability of supervising attorneys are all likely to have long-term payoffs, however difficult to quantify with precision.”).

170. Cecchi-Dimeglio, *supra* note 21.

171. Pisano, *supra* note 23; see also DEStEFANO, *supra* note 23.

and resilience.¹⁷² And, in fact, they test high on mindsets and attributes that are inapposite to those of an innovator like skepticism, cynicism, judgment, competitiveness, and autonomy.¹⁷³ This is unsurprising given that the traditional competitive law school curriculum focuses on solo, autonomous work that requires analytical and strategic analysis, avoids risk, and seeks consistency with precedent. This stands in stark contrast to collaborative problem-solving that requires empathetic and experimental analysis that seeks novel (perhaps even risky) solutions and focuses on problem-finding versus problem-solving.¹⁷⁴

As I have written about in detail in my prior works, lawyers do not appear to have what Christensen and his coauthors identified as the five essential qualities of an innovator,¹⁷⁵ which are questioning, observing, networking, associating, and experimenting.¹⁷⁶

Questioning & Observing. True, lawyers are trained to question everything (and in a critical manner to ensure that they are accounting for all risks). But they question and observe differently than innovators do. Innovators question with an open and growth mindset, letting go of preconceptions and avoiding words that stop the scene, like “no” and “but.” They question with an open heart, with empathy, and they ask the “Five Whys”¹⁷⁷ to really understand the target audience and identify the root cause of the problem¹⁷⁸ before jumping to solve. On the other hand, lawyers test low on empathy and are considered less empathetic than other

178. Gardner, *supra* note 65; Dyer et al., *supra* note 176.

professionals.¹⁷⁹ When lawyers question and observe, they *investigate* to seek *material* evidence. They put their analytical caps on. This is critical because when people engage the network of neurons used for analysis, their brains suppress their ability to empathize.¹⁸⁰ Since it is difficult to be empathetic and analytical at once, it is no wonder that lawyers, who rely on analytics to do their jobs, prefer to engage the analytic network over the empathetic one when taking on critical tasks.¹⁸¹

Networking & Associating. Innovators build networks that are both tight and loose, as well as multidisciplinary and diverse.¹⁸² However, research shows that lawyers are often introverted, competitive, and prefer autonomy and independent work.¹⁸³ Also, lawyers are taught to have tight and long-lasting relationships as opposed to weak alliances.¹⁸⁴ Therefore, they don't create networks the same way that innovators do. As a result, lawyers fail to gain the advantages of what Professor Mark S. Granovetter calls "the strength of weak ties," which enables the association of things that might not otherwise be associated,¹⁸⁵ such as accepting what already exists to create new, innovative combinations.¹⁸⁶ Connecting dots like innovators do is only possible if lawyers have an open door to those who are different from them. As discussed at great length in my prior book, *Legal Upheaval: A Guide to Creativity, Collaboration, and Innovation in Law*, innovative solutions come from building on each other's ideas and saying "yes and" as opposed to "no but."¹⁸⁷ Although saying "no" and "but" helps lawyers prevent risks for their clients, it also prevents lawyers from connecting ideas with others so that they can migrate and eventually reach the exponential potential that Stephen Johnson calls "the adjacent possible."¹⁸⁸

Experimenting. Innovators experiment in multidisciplinary teams in real time, with an open door to possibilities. Lawyers, however, are more skeptical, less trusting than other professionals, and low on psychological resilience, making them risk averse and fearful of failure, which is

counterproductive to experimenting.¹⁸⁹ Therefore, lawyers enter meetings with a solution in hand, focused on defending their point of view and building their case. The result is that lawyers do not spend enough time problem-finding, the importance of which has been written about extensively by experts.¹⁹⁰ A famous quote by Albert Einstein says it best: “If I had an hour to solve a problem, I’d spend fifty-five minutes thinking about the problem and five minutes thinking about solutions.”¹⁹¹ If lawyers don’t spend the time experimenting and instead jump to solve, they can miss the mark. Sometimes, in their rush to “serve” clients, they solve for a symptom instead of the problem, as illustrated by the GM example above.

Lastly, research shows that, unlike innovators, lawyers generally have a fixed as opposed to growth mindset. This means that they believe their characteristics are not malleable, i.e., that they are born good at some things and bad at others and so, they are either analytical or not, collaborative or not, innovative or not. People with fixed mindsets view past success as proof of their brilliance and therefore, are resistant to change and advice on how to improve. Plus, they are fixated on doing the things that they are good at and avoiding things that are new. This becomes a self-perpetuating cycle. If a lawyer with a fixed mindset doesn’t think they are “good” at collaborating or innovating, they believe they can never learn it and therefore it is a risk to try it. Therefore, efforts toward collaborating with diverse groups often fail among lawyers. This is also part of why DE&I efforts have failed, too. Fixed-mindset lawyers who want “qualified” applicants who have the “skills and intellect” to do the job equates to “people who think and act like I do.” When you start from a baseline where most people are white and male, those fixed-mindset people are looking to find more identical people, which destroys DE&I—and without DE&I, innovation is stymied.

Thus, it is logical that lawyers have not answered corporate clients’ calls to collaborate or innovate. Whether it is due to temperament or training, the trouble with lawyers in the corporate marketplace is that they often lack the mindsets and skill sets to answer the call, and may believe that they are not, and cannot be, good at collaborating and innovating. Similarly, they may not truly believe that the benefits of collaborating in diverse teams accrue as suggested. Plus, the departments and firms in which they work do not promote a culture of DE&I, collaboration, or innovation. As such, without the skills, mindsets, cultural reinforcement, and firsthand experience, lawyers might not be fully convinced of or open-minded to the power of diverse collaboration for innovation, let alone its other important benefits. So, in

191. See, e.g., Nell Derick Debevoise, *The Third Critical Step In Problem Solving That Einstein Missed*, FORBES (Jan. 26, 2021, 4:50 PM), <https://www.forbes.com/sites/nelldebevoise/2021/01/26/the-third-critical-step-in-problem-solving-that-einstein-missed/> [https://perma.cc/633W-VL67].

essence, we have a classic chicken or egg problem. Why have DE&I efforts failed? Because lawyers have a fixed mindset and do not like nor know how to collaborate on innovative solutions. Why do lawyers (especially in-house and firm lawyers) have a fixed mindset and refuse to change or innovate? Because they lack experience (and success) in truly collaborating with diverse professionals (and reaping its rewards). It is perhaps obvious to say that the fixed mindset and inability to collaborate hurt innovation efforts, but the less obvious point is that the fixed mindset and inability to collaborate destroy DE&I efforts as well. The problems are mutually reinforcing and can interlock in positive ways to move forward on both or to interlock and keep us stuck where we are on both fronts. In other words, the explanation for these two failures is actually an explanation for *one* big, interconnected failure.

As long as the dichotomy exists between what lawyers are being called on to do by clients and, on the other hand, their current skill sets and mindsets, lawyers won't answer corporate clients' call for collaboration and innovation. It is for this reason that this Essay does not recommend that lawyers fix the problems that Rhode and other scholars have suggested as preventing the enhancement of DE&I.¹⁹² It is also for this reason that this Essay does not recommend that corporate clients add more carrots or sticks or increase their tracking and following up with firms on their DE&I initiatives. Doing so would be putting the cart before the horse. To answer the call for enhanced DE&I, lawyers need to be able to collaborate with people from diverse backgrounds and follow the right rules of engagement. Lawyers in the corporate legal marketplace need to be able to approach collaborative problem-solving the way that innovators do. This is because the way in which lawyers currently approach problem-solving ensures that they excel at their "law jobs" in providing substantive legal advice, preventing risks, and defending their client, but leaves them failing miserably at collaborating inclusively in diverse teams to innovate. So, what's the solution? Although I agree with Professor Renee Knake Jefferson that we should revise the Model Rules of Professional Responsibility to make it clear that lawyers have a duty to innovate,¹⁹³ arguably, that alone will not solve the root cause of the problem. A duty to innovate (without more) would also be putting the cart before the horse.

Lawyers need to be required to hone the mindset and skill set of an innovator *first* before they can live up to such a duty and answer the calls to collaborate and innovate and to enhance DE&I. To effectively address the DE&I gap, lawyers need to employ new practice techniques and, most importantly, they need to know how to work collaboratively and proactively in multidisciplinary, diverse teams to innovate. So essentially, the two calls

192. RHODE, *supra* note 3, at 68–83; *see also Are Legal Departments Really Better than Firms at Diversity?*, *supra* note 50.

193. *See, e.g.,* Renee Knake Jefferson, *Lawyer Ethics for Innovation*, 35 NOTRE DAME J.L. ETHICS & PUB. POL'Y 1, 3 (2021); Gillespie, *supra* note 169.

to action require the same answer: lawyers need to hone the mindsets and skill sets of an innovator. However, how do we ensure that?

B. Solution: Design Thinking, Change Management, and Adaptive Leadership Training

My recommendation is two-fold and works in tandem with Jefferson's recommended duty to innovate.¹⁹⁴ First, aspiring and practicing attorneys should be required to be trained in design thinking, a method of human-centered design that has the benefit of enhancing collaboration and innovation among multidisciplinary diverse teams, as well as developing the mindsets and skill sets of innovators. Second, senior in-house lawyers and firm leaders should be trained in change management and adaptive leadership so that they can drive cultural change within their organizations.

1. Design Thinking Training for Practicing and Aspiring Lawyers

The first recommendation is that aspiring and practicing lawyers be required to train in the theory *and* practice of design thinking. Design thinking is a method of human-centered design focusing on the user interface and experience¹⁹⁵ that was originally utilized by designers to create new products.¹⁹⁶ It was introduced later to the business world as a multidisciplinary and collaborative problem-solving process involving discovery, ideation, and experimentation.¹⁹⁷ At its heart is developing deep empathy with the pain points of the target audiences and holistic understanding of the influence of other key stakeholders so that solutions address needs without creating externalities that prevent usage and adoption.¹⁹⁸ Design thinking, as applied in the corporate world, has been the

195. See generally DON NORMAN, *THE DESIGN OF EVERYDAY THINGS* (2013); DON NORMAN, *EMOTIONAL DESIGN: WHY WE LOVE (OR HATE) EVERYDAY THINGS* (2004); WILLIAM LIDWELL, KRITINA HOLDEN & JILL BUTLER, *UNIVERSAL PRINCIPLES OF DESIGN* (2003).

196. See THOMAS LOCKWOOD, *DESIGN THINKING: INTEGRATING INNOVATION, CUSTOMER EXPERIENCE AND BRAND VALUE* xi (2009) ("Design thinking is essentially a human-centered innovation process that emphasizes observation, collaboration, fast learning, visualization of ideas, rapid concept prototyping, and concurrent business analysis, which ultimately influences innovation and business strategy."); Jeanne Liedtka, *Perspective: Linking Design Thinking with Innovation Outcomes Through Cognitive Bias Reduction*, 32 J. PROD. INNOVATION MGMT. 925, 926–27 (2014).

197. David M. Kelley, the founder of IDEO U (a consulting and design firm) and a professor at Stanford University, is generally credited with popularizing this method in the corporate world. See Tim Brown, *The Making of a Design Thinker*, METROPOLIS (Oct. 1, 2009), <https://metropolismag.com/viewpoints/the-making-of-a-design-thinker/> [<https://perma.cc/XJU2-VGAM>] ("David Kelley . . . said that every time someone came to ask him about design, he found himself inserting the word thinking to explain what it is that designers do. The term design thinking stuck.").

198. Franki Lake, *Human Centered Design vs Design Thinking vs Service Design vs UX . . . What Do They All Mean?*, LINKEDIN (Jun. 8, 2016), <https://www.linkedin.com/pulse/human-centred-design-vs-thinking-service-ux-what-do-all-simonds/> [<https://perma.cc/SBJ9-JE7A>].

subject of several well-known books and courses¹⁹⁹ and has begun to have influence in the corporate legal marketplace.²⁰⁰ Design thinking methods are used to create client-centric services that are *experiences*.²⁰¹ It is telling that many of the biggest global law firms and legal departments of MNCs are beginning to use design thinking to do just that. For example, the Centers for Medicare & Medicaid Services, the Hudson's Bay Company, LEGO, Microsoft, Spotify, iManage, LegalZoom, Dentons, DLA Piper, Linklaters, Paul Hastings, Pinsent Masons, Simmons & Simmons, and White & Case, to name a few, have all participated in LawWithoutWalls, an experiential learning program grounded in design thinking wherein lawyers, business professionals, and law and business students from universities around the world are placed on an intergenerational and international team to collaboratively create a viable, innovative solution to a real business, legal, or social justice problem.²⁰² Each team is sponsored by a corporate legal department, a firm, or a law-related company. The sponsoring entities pick the challenge for the team and select a couple of their legal and/or business professionals, along with a couple of their clients, to participate as team leaders to learn about design thinking methods and to change how they collaborate with others. The reason these entities participate in LawWithoutWalls is exactly why this Essay recommends lawyers and aspiring lawyers be trained in design thinking.

In addition to learning how to empathize with multiple kinds of stakeholders,²⁰³ participants also learn how to proactively collaborate on

199. See, e.g., TOM KELLEY WITH JONATHAN LITTMAN, *THE ART OF INNOVATION: LESSONS IN CREATIVITY FROM IDEO, AMERICA'S LEADING DESIGN FIRM* (2001); DANIEL H. 201. BROWN, *supra* note 199, at 184.

202. See generally *LWOW 2023 Program Overview*, LAWWITHOUTWALLS, <http://lawwithoutwalls.org/overview-2023-copy> [https://perma.cc/J4EW-GHYU] (last visited Feb. 6, 2023). LWOW has been offered in different formats over the years. From 2011–2019, “LWOW Original” was a part virtual, part in-person program over the course of four months. From 2013–2019, we also offered an all-virtual version, called “LWOW-X.” DeStefano et al., *supra* note 61, at 214–15 (describing LWOW-O and LWOW-X); see also *LWOW-X: Social Entrepreneurship*, LAWWITHOUTWALLS, <https://lawwithoutwalls.org/lwow-x> [https://perma.cc/S3LU-8LT4] (last visited Feb. 6, 2023). Starting in 2020, we stopped offering LWOW Original and in 2021, offered a three-day, in-person program called “LWOW Sprint,” which was converted to a four-week, all-virtual program called “LWOW Sprint-X” due to the COVID-19 pandemic. See *LWOW Sprint-X 2021: 20 January–10 February*, LAWWITHOUTWALLS, <https://lawwithoutwalls.org/lwow-sprintx> [https://perma.cc/VCF7-BR7E] (last visited Feb. 6, 2023). In 2022, we reintroduced LWOW Sprint, which offered virtual training prior to a three-day, intensive, and in-person Sprint. See *Sprint 2022 In-Person 25–27 March 2022, in Segovia, Spain*, LAWWITHOUTWALLS, <https://lawwithoutwalls.org/lwow-sprint-2022> [https://perma.cc/WPF3-NRRX] (last visited Feb. 6, 2023).

203. Helen Riess, *Empathy Can Be Taught and Learned With Evidence-Based Education*, 39 *EMERGENCY MED. J.* 418, 418–19 (2022); F. Diane Barth, *Can Empathy Be Taught?*, *PSYCH. TODAY* (Oct. 18, 2018), <https://www.psychologytoday.com/us/blog/the-couch/201810/can-empathy-be-taught> [https://perma.cc/5XBJ-AQ9Y]; Tony Vlismas, *Being*

multidisciplinary teams—to question, observe, experiment, network, and associate—the way that innovators do,²⁰⁴ with an inclusive, growth mindset.²⁰⁵ And if the training utilizes proven design thinking techniques, like, for example, the 3-4-5 Method,²⁰⁶ they will also learn the other skills on the Delta, like those related to having a business mindset (e.g., business planning, project and budget management, communication, presentation, and data analytics, to name a few). This is, in part, why this Essay recommends requiring design thinking training for *all* aspiring and practicing attorneys, and not just the great majority who will or already work in the corporate legal marketplace. Design thinking training provides benefits for all types of lawyers,²⁰⁷ and it fills some of the gaps in legal education that scholars like Rhode and others have identified.²⁰⁸ Furthermore, the challenges assigned to teams to solve can vary greatly—from the business of law to access to justice—and arm lawyers with the ability to answer the two calls to action in this Essay. Aspiring and practicing lawyers will experience firsthand the benefits that come from collaborating on diverse teams and will get the proof that it leads to more innovative, creative solutions. In fact, the 3-4-5 Method has been tested and proven successful in making these gains among over 200 multidisciplinary teams that included practicing and aspiring legal professionals, along with professionals from other disciplines.

While some may be skeptical of the ability of design thinking training, corroborating the success of LawWithoutWalls is the number of schools that teach design thinking to reach the same goals as expounded above, including

Empathetic Is Important. Can You Learn Empathy?, ACUITY INSIGHTS (July 7, 2020), <https://takealtus.com/2020/07/empathy-2/> [<https://perma.cc/UAA9-STEJ>].

204. Victor D. Quintanilla, Joan K. Middenforf, Francesca L. Hoffman, Emily Kile-Maxwell, Danielle M. Sweet & Kaelyne Yumul Wietelman, *Experiential Education and Access-to-Justice Within U.S. Law Schools: Designing and Evaluating an Access-to-Justice Service Learning Program Within the First-Year Curriculum*, 7 *IND. J.L. & SOC. EQUAL.* 88, 92 (2019) (describing the success of its human-centered, design thinking program in addressing the “cognitive, emotional, and experiential bottlenecks” that law school students experience in the first-year curriculum).

205. *The Importance of Adopting a Growth Mindset in Your Teaching*, UNIV. OF MA. GLOB., <https://www.umassglobal.edu/news-and-events/blog/the-importance-of-adopting-a-growth-mindset-in-your-classroom> [<https://perma.cc/JEJ5-52NT>] (last visited Feb. 6, 2023); Carol S. Dweck, *Can Personality be Changed?: The Role of Beliefs in Personality and Change*, 17 *CURRENT DIRECTIONS PSYCH. SCI. L. REV.* 391, 391–94 (2008).

206. Over the course of the past decade, I have developed the 3-4-5 Method, which has been tested on over 235 multidisciplinary teams on four-month innovation journeys. DEStEFANO, *supra* note 4, at 133–202; DEStEFANO, *supra* note 23. I also recently used this method to teach a new design thinking course at the University of Miami College of Engineering. However, there are other proven methods and a lot of books describing them.

207. For this reason, I recommend requiring this training for *all* aspiring and practicing attorneys, not just those in the corporate legal marketplace.

208. Rhode and other scholars have argued that compounding the DE&I problem is cognitive bias. RHODE, *supra* note 3, at 68, 187, 193. Interestingly, although design thinking is not immune to cognitive bias, design thinking training has been claimed to help overcome cognitive bias. *See, e.g.*, Liedtka, *supra* note 196, at 931–36; Catherine Burton, *Design Thinking vs. Cognitive Biases: 10 Biases for Innovation to Overcome*, UNIV. VA. DARDEN (June 10, 2021), <https://ideas.darden.virginia.edu/innovators-journey> [<https://perma.cc/8CCC-7X9K>].

some of the most elite, like Harvard University, the Massachusetts Institute of Technology, Stanford University, and Oxford University.²⁰⁹ While in 2011, LawWithoutWalls may have been the first to teach design thinking to lawyers and law school students, the good news is that other law schools now offer classes and full-blown programs in design thinking to students and/or practitioners.²¹⁰ Also, over thirty law schools from around the world have participated in LawWithoutWalls. Further, other legal scholars now also tout the benefits of design thinking training for lawyers.²¹¹

As for the practicality of fulfilling the recommendation, I leave the details to the individual bar and regulatory associations in each country and/or state to determine. However, the idea is that students could take part in LawWithoutWalls,²¹² a simplified version of it, or any of the other programs offered by schools that bring together real-world, agile teams that are interdisciplinary, intergenerational, and multicultural. With respect to practicing attorneys, lawyer regulating entities could require continuing legal

INST., <https://www.obmi.institute/courses/designove-mysleni/> [<https://perma.cc/8RPE-JNRT>] (last visited Feb. 6, 2023).

210. Many law schools have created law school design labs or programs, including Brigham Young University J. Reuben Clark Law School, Campbell Law School, Chicago-Kent College of Law, Cornell Law School, Duke University School of Law, Georgetown University Law Center, Harvard Law School, Indiana University Maurer School of Law, Northeastern University School of Law, Stanford Law School, Suffolk University Law School, University of Arizona James E. Rogers College of Law, University of Michigan Law School, and Vanderbilt University Law School. See Margaret Hagan, *Justice Innovation with Law School Design Labs*, AM. BAR ASS'N (June 15, 2018), https://www.americanbar.org/groups/legal_services/publications/dialogue/volume/21/spring-2018/iolta-design-labs/ [<https://perma.cc/THM3-7H5B>].

211. Other scholars have recommended using design thinking approaches to create new products, services, and innovations in law to enhance communication, empathy, and service delivery by lawyers. See, e.g., Alice Armitage, Andrew K. Cordova & Rebecca Siegel, *Design-Thinking: The Answer to the Impasse Between Innovation and Regulation*, 2 GEO. TECH. L. REV. 3 (2017) (recommending the principles of design thinking to create a new process to regulate innovative companies); Lois R. Lupica, Tobias A. Franklin & Sage M. Friedman, *The Apps for Justice Project: Employing Design Thinking to Narrow the Access to Justice Gap*, 44 FORDHAM URB. L. J. 1363 (2017); Victor D. Quintanilla, *Human-Centered Civil Justice Design*, 121 PENN. ST. L. REV. 745 (2017); Seb Murray, *Law Schools Begin to Embrace Design Thinking*, LLM GUIDE (Apr. 23, 2021), <https://llm-guide.com/articles/law-schools-begin-to-embrace-design-thinking> [<https://perma.cc/Q3VA-KURF>]; Jeff Cox, *Human-Centered Design in Legal Education: Why It's Needed Now and What's at Stake*, L. TECH. TODAY (Feb. 11, 2020), <https://www.lawtechnologytoday.org/2020/02/human-centric-design-in-legal-education-why-its-needed-now-and-whats-at-stake/> [<https://perma.cc/W5NH-CHM6>].

212. See LAWWITHOUTWALLS, <http://lawwithoutwalls.org/> [<https://perma.cc/C9CD-4L4J>] (last visited Feb. 6, 2023). The original version of LawWithoutWalls, introduced in 2011, was partly virtual. Teams met in London for a two-day virtual kickoff for training and culture-creation, then worked virtually over a semester, concluding with an in-person “ConPosium” in Miami, at which participants presented their “Projects of Worth” to the 200+ community members and a panel of judges made up of academics, lawyers, business professionals, and venture capitalists. In 2013, we introduced an all-virtual version of the program that ended with the winning team being flown in to the in-person ConPosium.

education (CLE) training in design thinking. True, CLE has been criticized by Rhode (and others) as ineffective and poor in quality,²¹³ especially because of its lecture format that has been proven to be an inadequate tool.²¹⁴ However, even Rhode believed that some strategies could be implemented to make CLE effective,²¹⁵ like those this Essay is recommending—which is anything but lectures. This is because the only way to really learn how to employ design thinking techniques, and the only way to garner the benefit of changed mindsets and skill sets, is hands-on doing. As Aristotle said, “[f]or it is by doing what we ought to do when we have learnt the arts that we learn the arts themselves.”²¹⁶

As for the quality issue, lawyers could meet their required CLE by volunteering in existing programs already developed, approved, and proven successful.²¹⁷ There is also a plethora of design thinking executive education opportunities for legal professionals both inside and outside the legal market. Also, they often offer shorter, less intensive, high-quality opportunities for design thinking training. For example, Stanford offers a five-day boot camp in design thinking. And LawWithoutWalls offers a three day in-person sprint.²¹⁸ Additionally, there are many legal hackathons that could count as part of the CLE requirement.²¹⁹ A combination of these smaller learning opportunities might be able to satisfy a CLE requirement. Also, they serve as a great complement to a longer training program that provides recharging and upskilling, and that mirrors the demanding legal marketplace of today, which often requires multidisciplinary teams to be pulled together quickly to work collaboratively on urgent matters.

2. Change Management and Adaptive Leadership Training for Leaders of Law Firms and Corporate Legal Departments

The second recommendation is that firm and in-house legal leaders train in change management and adaptive (inclusive) leadership. This is because

the current processes, structures, and systems do not promote a culture of inclusivity, collaboration, and innovation, which contributes to the failure of current DE&I initiatives. Further, in-house and firm lawyers have acknowledged that they are not adept at change management, innovation management capabilities,²²⁰ or meeting changing leadership expectations.²²¹ Even if, with the recommended design thinking training, we are able to change individual mindsets and skill sets, we will only be able to create effective DE&I initiatives if lawyer leaders can lead and manage innovation, change, and culture creation, which are transformation efforts of the most difficult kind.²²² Plus, given that experts argue that innovation thinking is different from traditional business thinking, the challenges posed with leading innovation are different from those posed when leading strategic planning.²²³ As I discuss in great depth in my forthcoming book *Leader Upheaval: A Guide to Client-Centricity, Culture-Creation, and Collaboration*, there is nothing soft about culture creation, and the art of culture creation starts with the leader.²²⁴ Given that most senior lawyers were not trained in adaptive leadership or change management²²⁵ and that 75 percent of change efforts fail,²²⁶ in the complex, ever-changing, and volatile corporate legal environment, lawyers need training on how to handle today's adaptive challenges (for which there is no predetermined solution or trained experts that know how to solve the problem).²²⁷ The good news: there is a plethora of high-quality executive education courses on change

management and adaptive leadership that teach leaders how to create an inclusive culture and lead transformation. Although research has shown mixed results for DE&I training specifically,²²⁸ Rhode herself was a proponent of the kind of training proposed herein because of its focus on helping develop “interpersonal styles, as well as capabilities”²²⁹—both of which pertain to innovating, collaborating, and leading culture change. And research also shows that training works, and that adaptive leaders who know how to manage change are effective at creating inclusive cultures in which diverse lawyers feel a sense of belonging.

3. Potential Objections and Responses

The concept of training in design thinking, change management, and adaptive leadership is likely to generate a few objections.

Requiring a design thinking course in law school poses some problems related to the already very tight curriculum. However, importantly, as Rhode and others have pointed out, law schools need a makeover when it comes to practical and interactive training,²³⁰ and law faculty members themselves do not disagree. A recent study found that almost 50 percent of law faculty believed that “soft skills” like those of an innovator and adaptive leader should be taught in law school.²³¹ Further, there is support from the hiring

market. Big firms and big in-house corporate legal departments have openly encouraged law schools to incorporate design thinking methods into the curriculum.²³² There is also overwhelming support for DE&I at all levels in the legal marketplace. Tying the design thinking training requirement to the DE&I agenda should have some persuasive power. Also, because requiring additional credits would require revamping the entire curriculum, a good test would be for schools to include design thinking among the current experiential learning requirements.

As for finding people who can teach design thinking, these types of courses are not new in other disciplines, and they can be taught virtually.²³³ So, finding adjuncts to teach these courses should not prove a huge hurdle or expense. Given that the subject is not legally substantive, there will be a lower likelihood of pushback from tenured faculty about adjuncts teaching these courses. Also, if funding is an issue, there may be resources available. Although of course the level of commitment to DE&I varies as do the challenges, many countries, like Australia, Canada, England, and Wales have been overtly investing in innovation for over a decade.²³⁴ Even those jurisdictions that have not overtly endorsed regulatory reform still devote substantial resources to promoting innovation in legal services.²³⁵ These entities might relish the opportunity to promote their agendas at the law school level.

Another concern might be related to requiring practicing attorneys to pay for executive education courses because not everyone will be able to take advantage of volunteer opportunities. However, firms and in-house legal departments from all around the world invest in executive education training

of their lawyers,²³⁶ and there is support for the return on investment.²³⁷ This recommendation will hopefully help support this trend and create learning cultures that have been proven to enhance responses in the less predictable and complex environments such as the corporate legal marketplace.

CONCLUSION

Rhode deftly pointed out that “part of the [DE&I] problem lies in the lack of consensus about what exactly the problem is and what can be done to address it.”²³⁸ The good news is that this is just the type of problem that innovators—who are trained in design thinking—are equipped to solve. Therefore, if we train lawyers in design thinking to hone their mindsets and skill sets to be like those of an innovator, they may be better able to identify and build consensus around the root causes of DE&I problems. Moreover, they will have the prior experience (and proof) of the values that multidisciplinary collaboration toward innovation brings. Lastly, they will be equipped to begin to meaningfully contribute in creating viable, novel solutions to enhance DE&I in the corporate legal marketplace. As a result, they will be able to answer corporate clients’ calls for DE&I and collaboration and innovation at the same time, solving the chicken or egg problem in one fell swoop. Further, with change management and adaptive leadership training, lawyer leaders will be able to inspire, lead, and manage the type of culture transformation needed to support DE&I efforts from their inception to their adoption, while ensuring that diverse candidates that enter the system stay in the system. Thus, instead of contributing to the problem, or being the problem, lawyers will be part of the solutions.

The trouble with lawyers in the corporate legal marketplace, however, is that even with all the pressure from clients and all the research proving the business case and showing what is at stake, they still need convincing. So,

236. Law firms like Allen & Overy, Clifford Chance, Linklaters, Milbank, and White & Case invest in training, and some even partner with schools to develop tailored courses for their lawyers at elite institutions like Harvard University, Oxford University, and Jindal Global Law School—in some instances, they develop courses for law school students as well. See Caroline Binham, *Executive Education: Partners in Law*, FIN. TIMES (Nov. 25, 2011), <https://www.ft.com/content/90ecfb2e-1641-11e1-a691-00144feabdc0> [https://perma.cc/V6PM-W8WR]; see also Adella Chua, *How Much Does A New Recruit Cost to Onboard*, HUM. RES. DIR. (Sep. 22, 2017), <https://www.hcamag.com/ca/news/general/how-much-does-a-new-recruit-cost-to-onboard/119997> [https://perma.cc/222R-WA5Z] (“Canadian law firms are spending eye-watering sums to recruit and train new staff.”).

237. Research indicates that in-house legal departments invest in training, and a recent study by Gartner found that the most efficient legal departments spend almost twice as much of their budget on training than their peers. Press Release, Gartner, Inc., *Gartner Says Cost-Effective Legal Departments Invest Almost Twice As Much in Training Compared with Higher-Cost Peers* (Sept. 5, 2019), <https://www.gartner.com/en/newsroom/press-releases/2019-09-05-gartner-says-cost-effective-legal-departments-invest> [https://perma.cc/9CQ5-JEZG]. Research indicates that even small and solo firms invest in training, albeit the numbers are low—fifty percent for small firms and 30 percent for solo firms. See, e.g., *Law Firms Competing for Talent in 2022*, THOMSON REUTERS, <https://www.thomsonreuters.com/en/reports/law-firms-competing-for-talent-in-2022.html> [https://perma.cc/C9V6-NWRQ] (last visited Feb. 6, 2023).

238. RHODE, *supra* note 3, at 4.

this Essay concludes by highlighting the icing on the cake and making a call of its own. The icing is that, in addition to empowering lawyers in the corporate marketplace to answer both calls to action, the type of training recommended herein gives lawyers an additional competitive edge—it enables lawyers to provide the type of client-centric experience and proactive co-collaboration that exceeds expectations and *delights* their clients. So, the call to action this Essay makes is: don't wait. Don't wait for any of these recommendations to be adopted. Instead, *voluntarily* line up for the kind of training recommended and bring your clients with you, because proactively co-collaborating in a learning endeavor that enhances lawyers' skill sets is the kind of experience that transforms client relationships.
